

PACMAN FROG

CERATOPHYRYS

INTRODUCTION

Pacman Frogs live mainly on humid ground surrounded by leaf litter. They spend their days burrowed and waiting for food to come their way. Being this lazy means that they are not picky, and will eat just about anything that comes close to them. Pacman frogs are a great choice for a first-time reptile owner, as they don't require handling and are fairly low maintenance, but very fun to feed!

HABITAT

Humidity

50-80%

Temperature (Day)

80F

Temperature (Night)

70F

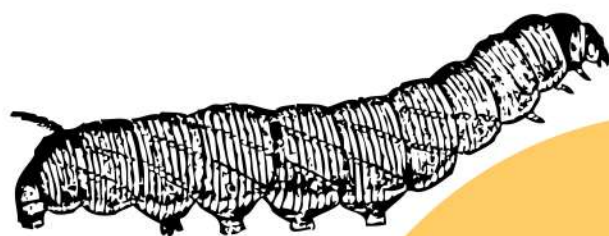

CARE LEVEL: BEGINNER

LIFESPAN: 6-10 YEARS

SIZE: 3-4 INCHES (MALE)

5-7 INCHES (FEMALE)

MORPHS: BROWN, GREEN, STRAWBERRY, PIKACHU, MUTANT, AND MORE!

FUN FACT:

PACMAN FROGS GET THEIR NAME FROM THE POPULAR ARCADE GAME, DUE TO THEIR HUGE MOUTHS

ENCLOSURE BASICS

Minimum tank size for 1 adult Pacman Frog: 20 Gallons

Pacman frogs are relatively lazy, and therefore do not need a large tank. Their enclosure should be decorated with plants and places to hide. The substrate can be any mix of natural products, such as coco fibers, bark, moss, leaf litter, etc. These are all great options to maintain proper humidity levels and allow for burrowing, as long as the substrate is deep enough. Pacman Frogs also like to occasionally take baths, so a large water bowl is necessary as well.

FEEDING

Pacman frogs have a very diverse diet. Young frogs will start by eating crickets and worms. As they grow, they can start to eat small fish like guppies or feeder goldfish. Pacman frogs can even start to eat frozen mice as they grow. Young Pacmans that only eat crickets or worms should eat every day, but adult Pacman frogs that are eating mice should only be eating twice per week. make sure that any crickets or worms being given to your Pacman frog are either being gut loaded or doused in supplements to ensure your frog is getting all the essential nutrients.
