

LEOPARD GECKO

EUBLEPHARIS MACULARIUS

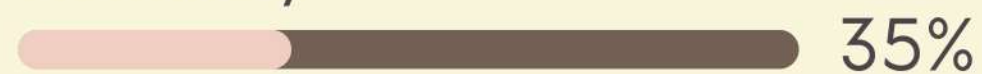

INTRODUCTION

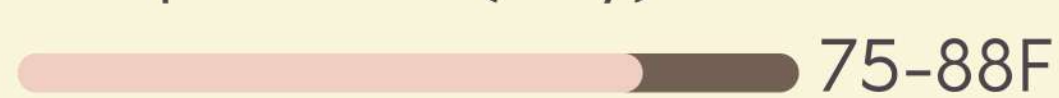

Leopard Geckos are great pets for first-time reptile owners, as long as plenty of research is done before adopting. They are curious, colourful, and can be hand-trained with time. However, leopard geckos can live as long as 20 years if given proper care, which makes them a big commitment! If you're looking for a bright and beautiful friendly reptile, then a leopard gecko is a great choice!

HABITAT

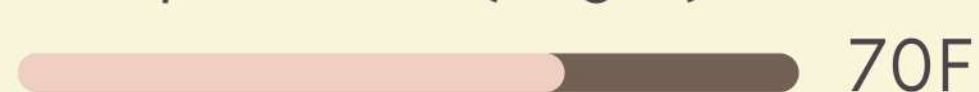

Humidity

Temperature (Day)

Temperature (Night)

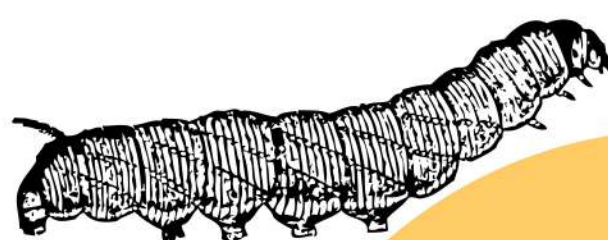

CARE LEVEL: INTERMEDIATE

LIFESPAN: 8-15 YEARS

SIZE: 8-10 INCHES

MORPHS: HI-YELLOW, MACK SNOW, SUNGLOW, TANGERINE, AND MORE!

ENCLOSURE BASICS

Minimum tank size for
1 Leopard Gecko: 30 gallons

Leopard Geckos love to explore, so the larger the cage, the better! Like most reptiles, leopard geckos are solitary creatures, and do not need to be kept with other lizards.

We do not recommend loose substrate for young leopard geckos, as to avoid eating it accidentally. Instead, we recommend Reptile Carpet, especially for young leopard geckos. If you do chose to use substrate, make sure to supervise your gecko closely or move into a separate tank during feeding times..

LIGHTING/HEATING

The best way to maintain proper temperature is to use an under-tank heater, as leopard geckos best absorb heat through their stomachs. We also recommend a low wattage heat bulb to allow for a temperature gradient and visibility. A UVB light is recommended, but not necessary as long as proper calcium and D3 supplements are being given.

FUN FACT:
UNLIKE MOST
GECKOS, LEOPARD
GECKOS DON'T HAVE
TOEPADS, SO THEY
ARE NOT GREAT
