

## INSTRUCTIONS

Read thoroughly prior to installation & operation

# AquaClear

MULTIFUNCTION

## Powerhead 50 | 70

Creates powerful water circulation and currents

### Applications:

- Water Circulation
- Undergravel Filters
- Quick Filters
- Protein Skimmers
- Fresh or Salt Water

## INSTRUCTIONS

Lire soigneusement avant d'installer et de faire fonctionner l'appareil.

# AquaClear

MULTIFONCTIONNELLE

## Powerhead 50 | 70

Tête motrice

Crée une circulation et des courants d'eau puissants

### Applications :

- Circulation d'eau
- Filtres sous-gravier
- Filtres rapides
- Écumoires de protéines
- Pour eau douce ou eau de mer

## INSTRUCTIONS

Lire soigneusement avant d'installer et de faire fonctionner l'appareil.

## BEDIENUNGSAUFLISTUNG

Vor Installation und Inbetriebnahme bitte sorgfältig durchlesen

# AquaClear

MULTIFUNKTIONAL

## Powerhead 50 | 70

Erzeugt kraftvolle Wasserzirkulation und Strömung

### Anwendungen

- Wasserzirkulation
- Bodenfilter
- Schnellfilter
- Einweihabschäumer
- Süß- oder Meerwasser

## INSTRUCCIONES

Leer atentamente antes de instalar y de poner en funcionamiento.

# AquaClear

CABEZAL MECÁNICO MULTIFUNCIONAL

## Powerhead 50 | 70

Crea fuertes corrientes y una potente circulación del agua

### Usos:

- Circulación del agua
- Filtros enterrados en grava
- Filtros rápidos
- Separadores de urea
- Agua dulce o salada

## ENGLISH

## DEUTSCH

AquaClear Powerheads deliver outstanding performance in a variety of applications. They can efficiently drive undergravel filters, circulate and aerate aquarium water, and attach to filtration accessories such as the AquaClear Quick Filter to support crystal clear water conditions.

AquaClear Powerheads can be used to raise oxygen levels, which is important when there are increases in water temperature or fish population, and during the treatment of diseases.

AquaClear Powerheads can also be connected to drive protein skimmers, which are essential devices for most marine aquaria.

Freshwater aquaria benefit from additional currents in many applications. Using a Powerhead in combination with an AquaClear Quick Filter provides added safe mechanical filtration for cleaner water conditions and the protection of baby fish.

AquaClear Powerheads are indispensable in smaller reef aquaria where they can be easily hidden and still provide highly beneficial currents.

AquaClear's unique reverse flow feature allows the Powerhead to force water down the undergravel riser stem and beneath the gravel. This helps promote bacterial growth from the bottom up.

In addition to being the ultimate submersible water movers, AquaClear Powerheads also include the following design, safety and utility innovations:

- Hermetically-sealed, completely submersible motor units which are insulated with highly effective epoxy resin to insulate against harsh freshwater and saltwater environments
- Compact, energy-efficient motor units are isolated to eliminate maintenance
- Convenient suction cup brackets and rim attachment brackets allow quick and easy installation and removal.

## FRANÇAIS

Les têtes motrices AquaClear assurent un rendement exceptionnel dans une variété d'applications. Elles peuvent faire fonctionner efficacement les filtres sous-gravier, faire circuler et oxygner l'eau d'aquarium et être fixées à des accessoires de filtration tels que le filtre rapide AquaClear, pour obtenir une eau claire comme du cristal.

Les têtes motrices AquaClear peuvent être utilisées pour accroître le niveau d'oxygène, un facteur important dans le cas d'une augmentation de la température de l'eau ou de la population de poissons, et au cours d'un traitement de maladies.

Les têtes motrices AquaClear peuvent aussi être raccordées pour actionner des épurateurs de protéines, qui sont des appareils essentiels à la plupart des aquariums d'eau de mer.

Les aquariums d'eau douce profitent de courants supplémentaires dans de nombreuses applications. La combinaison d'une tête motrice et d'un filtre rapide AquaClear assure un supplément de filtration mécanique sûre, pour une eau plus propre et la protection des alevins.

Les têtes motrices AquaClear sont indispensables dans les aquariums de récifs plus petits où ils peuvent être cachés facilement et produire quand même des courants bénéfiques.

En plus d'être des agitateurs d'eau de qualité supérieure, les têtes motrices AquaClear comprennent les innovations suivantes en matière de conception, de sécurité et d'utilité :

- Leur moteur scellé hermétiquement, complètement submersible et isolé avec de la colle époxy extrêmement efficace pour protéger des environnements rigoureux d'eau douce et d'eau de mer;
- Leur moteur compact et éconergétique isolé pour éliminer l'entretien;
- Un support à ventouses et un support pour cadre d'aquarium commodes permettent une installation et un retrait rapides et simples.

## ESPAÑOL

Los cabezales mecánicos AquaClear sirven para múltiples aplicaciones y tienen un desempeño excelente. Pueden hacer funcionar eficazmente los filtros enterrados en la grava, hacer circular y aírere el agua del tanque y se conectan a los accesorios de filtración, como el Quick Filter de AquaClear, destinados a mantener el agua cristalina.

Los cabezales mecánicos AquaClear también pueden utilizarse para elevar los niveles de oxígeno, lo cual es importante cuando aumenta la temperatura del agua o la población de peces, y durante el tratamiento de enfermedades.

Los cabezales mecánicos AquaClear también pueden conectarse para hacer funcionar los separadores de urea, esenciales para la mayoría de los acuarios marinos.

Los acuarios de agua dulce se benefician con corrientes adicionales en numerosas aplicaciones. Si estos cabezales se usan con un filtro rápido de AquaClear se aumenta la seguridad de la filtración mecánica para obtener un agua más limpia y proteger los peces pequeños.

En los acuarios más pequeños con arrecifes los cabezales mecánicos AquaClear son indispensables, fácilmente escondidos, sin dejar de suministrar corrientes altamente beneficiosas. La característica singular de inversión del flujo permite al cabezal mecánico forzar el agua en el tubo sumergido en la grava y debajo de la grava, lo que ayuda al crecimiento de bacterias de abajo hacia arriba.

Además de ser los mejores dispositivos sumergibles de movimiento de agua, los cabezales mecánicos AquaClear vienen con las siguientes innovaciones prácticas, de seguridad y diseño:

- motores herméticamente cerrados y completamente sumergibles, aislados con resina epóxica altamente eficaz, para resistir los duros efectos del agua salada y dulce;
- motores compactos, energéticamente eficientes y aislados para eliminar el mantenimiento;
- soporte con ventosas y de sujeción para el borde del acuario, convenientes y que permiten la instalación y desinstalación rápida y fácil.

## SPECIFICATIONS/SPÉCIFICATIONS / TECHNISCHE ANGABEN/ESPECIFICACIONES

AquaClear Powerheads bieten eine herausragende Leistung in einer Vielzahl von Anwendungsbereichen. Sie treiben auf wirksame Weise Bodenfilter an, sorgen für die Zirkulation und Sauerstoffaufnahme des Aquariumwassers und lassen sich an Zubehör wie etwa dem AquaClear Quick Filter anschließen, um kristallklare Wasserbedingungen zu erzielen.

AquaClear Powerheads lassen sich zur Erhöhung des Sauerstoffniveaus verwenden. Dies ist wichtig bei einem Anstieg der Wassertemperatur oder der Fischpopulation sowie während der Behandlung von Krankheiten.

AquaClear Powerheads lassen sich außerdem zum Antrieb von Einweihabschlämern nutzen, deren Einsatz in den meisten Seewasseraquarien unverzichtbar ist.

Süßwasserquarien profitieren von den durch viele Anwendungen geschaffenen zusätzlichen Strömungen. Der Einsatz eines Powerhead in Verbindung mit dem AquaClear Quick Filter garantiert ihnen eine zusätzliche mechanische Filtration für sauberere Wasserbedingungen und den Schutz von Jungfischen.

AquaClear Powerheads sind unverzichtbar in kleinen Riffaquarien, wo sie leicht außer Sicht angebracht werden können und trotzdem hochgradig nützliche Strömungen hervorrufen.

AquaClear Powerheads sind nicht nur das Nonplusultra unter den eintauchbaren Umwälzpumpen, sondern bieten darüber hinaus die folgenden Innovationen bei Konstruktion, Sicherheit und Gebrauch:

- Luftdicht abgeschlossene, vollständig eintauchbare Motoreinheiten, die mit hochwertigem Epoxidharz isoliert sind, um die Isolierung auch in anspruchsvollen Süß- und Seewasserumgebungen zu gewährleisten.
- Kompakte, energiesparende Motoreinheiten, die isoliert sind, um Wartungsanforderungen auszuschließen.
- Praktische Saugnäpfe, Halteklemmen und Schlauchverbinder, die den schnellen und problemlosen Anschluss von Einweihabschlämern, Sprührohr und anderem Zubehör ermöglichen.

### IMPORTANT SAFETY INSTRUCTIONS

**WARNING** - To guard against injury, basic safety precautions should be observed when handling the Powerhead, including the following:

#### 1. READ AND FOLLOW ALL SAFETY INSTRUCTIONS

and all important notices on the appliance before using, for the complete enjoyment, use and understanding of this product. Failure to do so may result in loss of fish life and/or damage to the unit.

**2. DANGER** — To avoid possible electric shock, special care should be taken since water is employed in the use of aquarium equipment. For each of the following situations, do not attempt repairs yourself; return the appliance to an authorized service facility for service or discard the appliance.

A) If the Water Pump falls into the water, DON'T reach for it! First unplug it and then retrieve it. If electrical components of the appliance get wet, unplug the appliance immediately.

B) If the Water Pump shows any sign of abnormal water leakage, immediately unplug it from the power source.

C) Carefully examine the appliance after installation. It should not be plugged in if there is water on parts not intended to be wet.

D) Do not operate any appliance if it has a damaged cord or plug, or if it is malfunctioning or dropped or damaged in any manner. **The power cord of this appliance cannot be replaced; if the cord is damaged, the appliance should be discarded.** Never cut the cord.

E) To avoid the possibility of the appliance plug or receptacle getting wet, position the appliance to one side of a wall-mounted receptacle and prevent water from dripping onto the receptacle or plug. A "drip loop" (Fig. 1) should be arranged for the cord connecting the appliance to the receptacle. The "drip loop" is that part of the cord below the level of the receptacle or the connector, if an extension cord is used, to prevent water travelling along the cord and coming in contact with the receptacle.

If the plug or receptacle does get wet, DON'T unplug the cord. Disconnect the fuse or circuit breaker that supplies power to the appliance. Then unplug and examine for presence of water.

3. Close supervision is necessary when any appliance is used by or near children.

4. To avoid injury, do not touch moving or hot parts.

5. Always unplug an appliance from the outlet when not in use, before putting on or taking off parts, and before cleaning. Never yank the cord to pull plug from outlet. Grasp the plug and pull to disconnect.

6. THIS IS AN AQUARIUM PUMP. Do not use an appliance for other than intended use (i.e. don't use in swimming pools, garden ponds, bathrooms, etc.). The pump is suitable for use in water with temperature up to 35°C. The use of attachments not recommended or sold by the appliance manufacturer may cause an unsafe condition.

7. Do not install or store the appliance where it will be exposed to the weather or to temperatures below freezing.

8. Make sure an appliance mounted on a tank is securely installed before operating it.

9. Read and observe all important notices on the appliance.

10. If an extension cord is necessary, a cord with proper rating should be used. A cord rated for less amperes or watts than the appliance rating may overheat. Care should be taken to arrange the cord so that it will not be tripped over or pulled.

11. **CAUTION: POWERHEAD MUST NOT RUN DRY.**

### SAVE THESE INSTRUCTIONS

#### INSTALLATION

**Caution: Disconnect the plugs of all the appliances inside the aquarium before putting your hands in the water.**

#### UNDERGRAVEL FILTER OPERATION

1. Determine the difference in height between the rim of the aquarium and the seated position of adapter cone in the Undergravel Filter Riser Stem (approx. 4" to 7" / 10 cm to 18 cm).

2. Cut or adjust Undergravel Riser Stem to correct height.

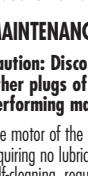

Fig.1

- Seat Powerhead adapter cone into the Undergravel Filter Riser Stem and rotate aquarium rim attachment knob to securely tighten the clamp to required aquarium rim width. Alternately, position suction cup bracket and slide Powerhead into guides.

**NOTE:** Aquariums which use very fine grade gravel or sand may require nylon mesh placed over the strainer to prevent the Powerhead from clogging in normal flow position.

**1. READ AND FOLLOW ALL SAFETY INSTRUCTIONS** and all important notices on the appliance before using, for the complete enjoyment, use and understanding of this product. Failure to do so may result in loss of fish life and/or damage to the unit.

#### OPERATION

1. Adjust Water Movement Switch to green position for normal flow or red position for reversed flow.

2. Adjust flow rate to desired strength if required.

3. Connect cord to electrical outlet.

#### QUICK FILTER OPERATION

**Powerhead 50 and 70 can easily be converted to a "Quick Filter" to remove dirt and debris quickly.**

The "Quick Filter" (Art. #A-575) can be obtained from your local pet dealer.

A) If the Water Pump falls into the water, DON'T reach for it! First unplug it and then retrieve it. If electrical components of the appliance get wet, unplug the appliance immediately.

B) If the Water Pump shows any sign of abnormal water leakage, immediately unplug it from the power source.

C) Carefully examine the appliance after installation. It should not be plugged in if there is water on parts not intended to be wet.

D) Do not operate any appliance if it has a damaged cord or plug, or if it is malfunctioning or dropped or damaged in any manner. **The power cord of this appliance cannot be replaced; if the cord is damaged, the appliance should be discarded.** Never cut the cord.

E) To avoid the possibility of the appliance plug or receptacle getting wet, position the appliance to one side of a wall-mounted receptacle and prevent water from dripping onto the receptacle or plug. A "drip loop" (Fig. 1) should be arranged for the cord connecting the appliance to the receptacle.

If the plug or receptacle does get wet, DON'T unplug the cord.

Disconnect the fuse or circuit breaker that supplies power to the appliance.

Then unplug and examine for presence of water.

3. Close supervision is necessary when any appliance is used by or near children.

4. To avoid injury, do not touch moving or hot parts.

5. Always unplug an appliance from the outlet when not in use, before putting on or taking off parts, and before cleaning. Never yank the cord to pull plug from outlet. Grasp the plug and pull to disconnect.
